System Requirements:

- USB 2.0 interface / 3.0 administrator rights
- Windows® XP/Vista/Windows® 7
- one free USB or eSATA port

Technical specifications may change without notice

VICTORINOX
SWISS ARMY

A LIGHTWEIGHT AND PORTABLE ALTERNATIVE TO BULKY EXTERNAL HARD DRIVES

Carry your files, (like, all of your files) in your pocket, (just to be clear, we're talking about every word document, presentation, song, funny cat photo, last year's taxes, a movie, or two, or fifty, and whatever else.) Take it all with you - the SSD securely stores and transports up to 1 terabyte of data. The pre-loaded *Victorinox Secure* software suite is equipped with 256 AES combination hardware and software encryption, offering un-hacked, iron clad security for all of your important files.

COMPLETE AND UTTER ADAPTABILITY WITH OUR COMBINATION CONNECTOR

The dual connector (combination USB 2.0/3.0 and eSATA II) fits any USB or eSATA port; offering the fastest read and write speeds of any external SSD in this form factor, which makes large data transfers a breeze. And the integrated bi-stable LCD graphic screen allows users to record what is stored on the drive and also displays an available capacity status bar.

TWO KNIFE BODIES – ONE DRIVE

Each SSD is packaged with two Swiss Army Knife bodies – red and black. The red knife body includes implements – blade, scissors, nail file/nail cleaner and screwdriver, while the black knife body is bladeless. Use the red knife body for everyday use and snap the drive into the black knife body when traveling via airplane.
